## Summary

I am a recent B.Tech graduate in Computer Science and Engineering from SRM Institute of Science and Technology with a strong technical background in Full-Stack Java development, ServiceNow (CSA and CAD certified), SQL, and AWS. I have hands-on experience building end-to-end web applications with Java, Spring Boot, and React, along with IT Service Management (ITSM) automation, cloud-native application development, and data analytics. I possess a solid foundation in Object-Oriented Programming, Data Structures, Design Patterns, and RESTful API development, along with practical exposure to Agile methodologies and System Administration.

## Education

### SRM Institute of Science and Technology

B.Tech in Computer Science and Engineering — Grade : 8.61 CGPA

September 2022 – May 2026

Chennai, India

### Narayana IIT Academy

Secondary Education — Grade : 68.8 %

April 2020 – June 2022

Nellore, India

### Sri Chaithanya Techno School

10th Standard — Grade : 99 %

June 2019 – July 2020

Hyderabad, India

## Technical Skills

**Languages** - Java, JavaScript, C++, SQL

**Web & Frameworks** - React.js, Spring Boot, Hibernate, REST APIs, HTML5/CSS3, Tailwind CSS

**Cloud & DevOps** - AWS (EC2, S3, Lambda), Docker, Jenkins CI/CD, Git

**Databases** - MySQL, SQL

**ServiceNow** - ITSM, Flow Designer, System Administration

**Data Analytics** - PowerBI, Tableau, Alteryx, Machine Learning

**Core Concepts** - OOP, Data Structures & Algorithms, Microservices, MVC Architecture

## Certifications

- ServiceNow Certified System Administrator (CSA), ServiceNow | [Link](#)
- ServiceNow Certified Application Developer (CAD), ServiceNow | [Link](#)
- Oracle Certified Java SE 11 Developer, Oracle | [Link](#)
- Alteryx Designer Advanced Certification, Alteryx | [Link](#)

## Projects

### Android Malware Detection System : Python, Flask, Scikit-learn, Random Forest, HTML/CSS/JS | [Live Demo](#)

- Built and deployed a full-stack machine learning web application that classifies Android network traffic as benign or malicious, using a Random Forest classifier trained on 10 key network-traffic features.
- Engineered a Flask REST API (/predict, /benign, /malware, /generate\_live) with RobustScaler-based feature normalization to handle outlier-heavy traffic data and return real-time predictions.
- Deployed the application on Render using Gunicorn with a GitHub-based workflow, enabling real-time malware classification through a browser interface.

### Web-Based Health Diagnosis System : Java, JSP, Servlets, MySQL, Docker, Spring | [Live Demo](#)

- Developed a full-stack health diagnosis web application using Java, JSP, and Servlets following the MVC architecture, supporting dataset upload, preprocessing, and ML-based disease prediction.
- Migrated the database from local MySQL to TiDB Cloud and containerized the application with Docker for deployment on Render, resolving JDBC connectivity and dependency issues along the way.
- Built modules for dataset management, preprocessing, and CNN/LSTM-based disease prediction, along with a performance analysis module comparing model accuracy, precision, recall, and F1-score.

### Water Quality Prediction System : Python, Scikit-learn, Pandas, HTML/CSS/JS | [Live Demo](#)

- Built a machine learning system to predict Ganga River water quality from physicochemical parameters (pH, dissolved oxygen, BOD, turbidity, conductivity) using Scikit-learn classification models.
- Performed data cleaning, feature selection, and an 80/20 train-test split, evaluating models on accuracy, precision, and recall to select the best-performing algorithm.
- Deployed a responsive HTML/CSS/JavaScript frontend demonstrating the end-to-end prediction workflow, with the training pipeline documented in a Jupyter notebook.

## Experience

### AWS Cloud Virtual Internship

February 2024 – May 2024

AICTE - Eduskills

Chennai, India

- Completed an AWS Cloud Virtual Internship under the AICTE-Eduskills initiative, gaining hands-on experience in designing, deploying, and managing cloud-based applications using core AWS services such as EC2, S3, AWS Lambda; and configured IAM users, roles, and policies to ensure secure access control, monitored application performance and resource utilization using Amazon CloudWatch, and implemented basic cost optimization practices to improve cloud efficiency.
