Summary

I am a final-year B.Tech Computer Science and Engineering student at SRM Institute of Science and Technology with a strong technical background in ServiceNow (CSA and CAD certified), Java, SQL, and AWS. I have hands-on experience in IT Service Management (ITSM) automation, cloud-native application development, and data analytics. I possess a solid foundation in Object-Oriented Programming, Data Structures, and Design Patterns, along with practical exposure to Agile methodologies and System Administration.

Education

SRM Institute of Science and Technology

B.Tech in Computer Science and Engineering — **Grade : 8.61 CGPA**

September 2022 – May 2026

Chennai, India

Narayana IIT Academy

Secondary Education — **Grade : 68.8 %**

April 2020 – June 2022

Nellore, India

Sri Chaithanya Techno School

10th Standard — **Grade : 99 %**

June 2019 – July 2020

Hyderabad, India

Technical Skills

Programming Languages - Java, C++, SQL

Cloud Services - AWS, EC2, S3, Lambda, CloudWatch, IAM

ServiceNow - ITSM, Flow Designer, Business Rules, Client Scripts, ACLs, System Administration

Data Analytics - PowerBI, Tableau, Alteryx, Machine Learning basics

Core Concepts - Object Oriented Programming, Data Structures and Algorithms

Certifications

- **ServiceNow Certified System Administrator (CSA)**, ServiceNow | [Link](#)
- **ServiceNow Certified Application Developer (CAD)**, ServiceNow | [Link](#)
- **Oracle Certified Java SE 11 Developer**, Oracle | [Link](#)
- **Alteryx Designer Advanced Certification**, Alteryx | [Link](#)

Projects

Android Malware Detection System (Major Project) : Python, Machine Learning, Deep Learning, Flask

- Designed and developed an intelligent Android malware detection system using Machine Learning and Deep Learning techniques to classify malicious and benign applications based on behavioral and permission-based features.
- Collected, preprocessed, and analyzed large-scale Android application datasets, implementing algorithms such as Random Forest, CNN, and hybrid classification models to improve malware detection accuracy and threat identification.
- Evaluated malware detection models using key performance metrics and integrated them into a Flask-based web application for real-time APK analysis and fast threat prediction.

Web-Based Health Diagnosis System (Research) : Python, CNN, Deep Learning, Ontology-Based Reasoning

- Designed and implemented a web-based intelligent health diagnosis system that combines Convolutional Neural Networks (CNN) with ontology-based medical reasoning to identify diseases and detect potential comorbidities from clinical data.
- Trained, validated, and evaluated deep learning models on medical datasets, achieving 67.4% classification accuracy, an F1-score of 0.82, and recall of 0.80, demonstrating reliable performance for complex diagnostic scenarios.
- Optimized model inference and reasoning pipelines to ensure diagnosis response times below 2 seconds, enhancing system usability and demonstrating the feasibility of deploying AI-assisted clinical decision support tools in real-world healthcare environments.

Water Potability Prediction : Python, Machine Learning, Data Preprocessing

- Developed machine learning models to predict water potability using physicochemical parameters for efficient water quality assessment.
- Performed data preprocessing, feature selection, and model optimization to improve prediction accuracy and overall performance.

Experience

AWS Cloud Virtual Internship

AICTE - Eduskills

February 2024 – May 2024

Chennai, India

- Completed an AWS Cloud Virtual Internship under the AICTE-Eduskills initiative, gaining hands-on experience in designing, deploying, and managing cloud-based applications using core AWS services such as EC2, S3, AWS Lambda; and configured IAM users, roles, and policies to ensure secure access control, monitored application performance and resource utilization using Amazon CloudWatch, and implemented basic cost-optimization practices to improve cloud efficiency.
